

mixeff vs lme4 scaling benchmark

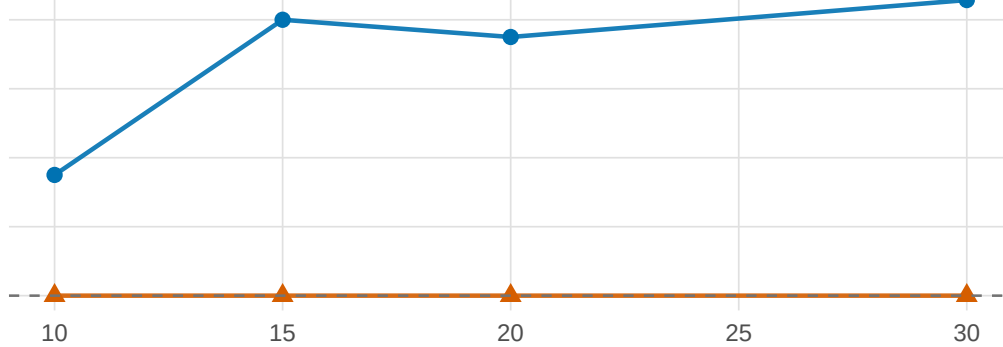

Relative speed uses lme4 median time as the baseline.

● mixeff ▲ lme4

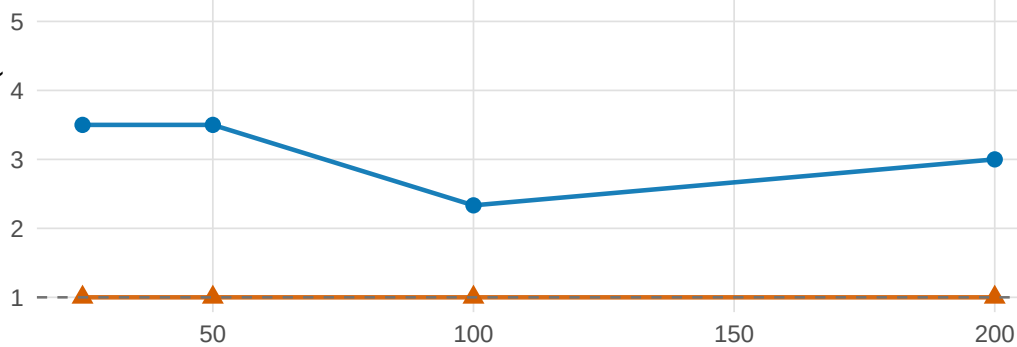

Crossed intercepts
(1 | subject) + (1 | item)

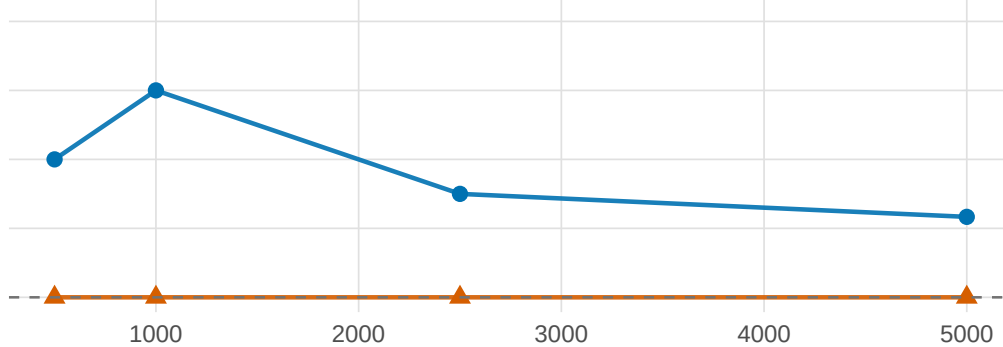

Crossed intercepts + subject slope
(1 + x | subject) + (1 | item)

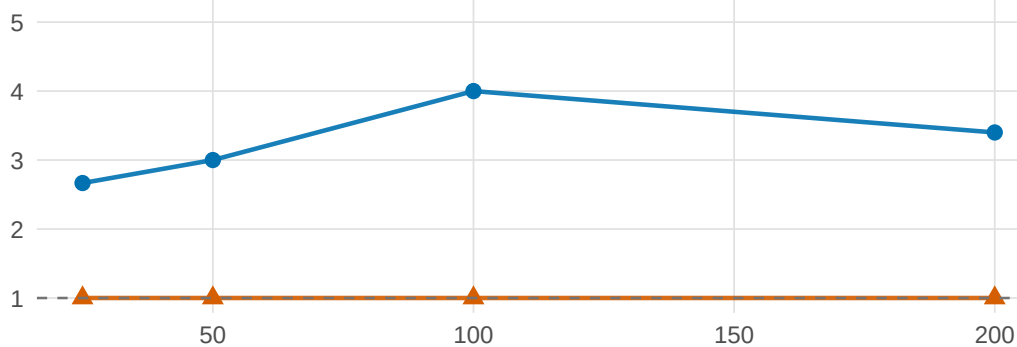

Random-intercept groups
(1 | subject)

Rows
(1 | subject)

Random slopes
(1 + x | subject)

Scale value (rows, grouping levels, or crossed subject/item levels)

Synthetic Gaussian LMMs fit with REML = FALSE. Points are median elapsed time over completed repetitions.
